

List of problems with project Nord Stream-2

Let me share with you some problems concerning the Nord Stream-2 project. The project is implemented by the company fully controlled by Gazprom. The project aims to build a gas pipeline along the bottom of the Baltic Sea from Russia to Germany. One such gas pipeline has already been built and caused great controversy in connection with environmental safety.

The construction of a second gas pipe on the bottom of the Baltic Sea is alarming for the following reasons:

1. The gas pipeline runs through the Kurgalsky nature reserve, which will lead to the destruction of the habitats of rare species of birds, animals and plants: <http://m.activatica.org/problems/view/id/602/version/1748>
2. The implementation of the Nord Stream 2 project has just started but it is already linked to violations of Russian legislation and international conventions (Ramsar Convention). Recently in Russia there have been a public hearing on this project at which the Russian authorities made an attempt to illegally change the status of territory of Kurgalsky nature reserve and lower its ecological significance: <http://m.activatica.org/blogs/view/id/3383/title/kurgalskii-refuge-in-the-crooked-lens-of-the-administration-or-why-you-need-to-go-to-hearings>
3. Nord Stream-2 is been constructed after Paris climatic summit, when it seems that all countries have recognised the danger of hydrocarbon fuels. However, here we have a project which aims to significantly increase gas supplies to Europe by 2030.
4. The project is being implemented jointly by Western businesses and the Putin's regime after the Boeing catastrophe, the annexation of Crimea, and the aggression against Ukraine. The implementation of this dangerous project will help Putin's regime to become stronger at the expense of Europeans paying money for the Russian fossil fuel.
5. The head of Nord Stream 2 AG is Warnig Matthias - Putin's allies, who served in the Stasi and maybe linked to Russian secret services
